

Title: Effect of wetting agents on efficacy of Pageant for *Alternaria* leaf spot on Alstroemeria

Host: Field planting of Alstroemeria at Mellano and Company in San Luis Rey, CA.

Inoculation: Plants were naturally infected with *Alternaria* sp. at test initiation. They are approximately one meter tall at the rating date. Beds are 3 feet wide and 20 feet long (plot size). The treatments were replicated four times.

	Treatments:	Rate/100 gal
A.	Water	----
B.	Pageant and Super 7	18.5 oz and 4 oz, respectively
C.	Pageant and Silwet 77	18.5 oz and 2 oz, respectively
D.	Pageant and Capsil	18.5 oz and 4 oz, respectively

Chemical application dates: All treatments were applied as a foliar spray as listed above on 18 March, 1, 15 and 29 April, 13 and 27 May 2008.
